***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-3 and 9-10 are rejected under 35 U.S.C. 102(e) as being anticipated by Mahapatro (6,571,215).

What is claimed is:

Mahapatro

1. A system for adaptive functional composition of software components, to fulfill requests for higher-order functions comprising:

See the title and the abstract and note that the assigning and scheduling features provide for the adaptive functions.

a catalog of system resources including tools, applications, web services, and data repositories each implementing one or more functions and constraint information relating to the system resources;

The list of tasks in col. 1 lines 26-38 is considered to represent the catalog.

a constraint solver configured to select a subset of the system resources based upon the request and the constraint information in said catalog;

The constraint solver is considered taught via col. 1 lines 56-52.

and a composer configured

See col. 1 lines 47-55. The tasks are

to optimally sequence the functions and cause execution of the sequence of functions based upon the selection of system resources by said constraint solver.

sequenced (optimally sequenced) based on the constraints. See also col. 5 lines 11-44 and col. 6 lines 6-18, which specifies the selection of resources to maximize utilization and minimize idle times.

2. The system of claim 1, wherein said constraint information comprises: (i) function hierarchies of abstract function comprised of primitive functions, and

See col. 5 lines 45-62 and col. 6 lines 25-67, which discusses dependencies (hierarchies) and grouping tasks for scheduling purposes (ordering relations).

(ii) ordering relations between functions.
